Summary

I'm an innovative, creative, and versatile Software Engineer with over five years of professional experience in building secure web applications and interactive marketing websites. I am well-rounded in front-end best practises, modern UI frameworks and latest development tools. Dynamic, fast-paced environment with like-minded people is where I excel the most.

Strengths

- Modern JavaScript (ECMAScript 2015+)
- HTML5 and its underlying APIs
- CSS3 and its latest updates
- React.js, Preact.js, and Backbone.js UI libraries
- Webpack and its configuration for module bundling
- Server side development with Node.js
- Craft CMS based marketing website creation
- Version control with Git (GitFlow) and SVN
- Command-line interface in Linux environments
- Profiling and debugging using developer tools
- Secure coding best practices (GIAC certified)
- Iterative development using agile methodologies
- Quick to adapt and learn new technologies

Experience

Software Engineer

Secureworks | March 2015 – Present | Remote / Edinburgh, Scotland

I planned and delivered an abundance of features to support the transition of 4,400 clients to the new Managed Security Services Portal. Coordinated multiple teams and rolled out Secureworks' new branding across numerous platforms while reducing codebase complexity and improving overall front-end performance.

Responsibilities

- Develop secure applications using JavaScript, HTML5 and CSS3
- Engage in products' architecture, design, and code reviews
- Present new product features to stakeholders
- Deploy features in the production environment
- Advise teams on front-end best practices
- Analyse high-level technical concepts and reduce them to estimated deliverables

Digital Media Developer

Whitespace | October 2012 – March 2015 | Edinburgh, Scotland

I worked on diverse, award-winning projects for clients such as Royal Bank of Scotland, Sainsbury's Bank, and the Scottish Government. Helped to launch Transport of Edinburgh brand, with work across Edinburgh Trams and Lothian Buses' websites. I also built an application for transport operators to broadcast incidents and diversions via social media.

Responsibilities

- Turn complex designs into living interfaces using JavaScript, HTML5, and CSS3
- Integrate Content Management Systems to static prototypes
- Collaborate with UX and design teams to execute projects beyond client expectations
- Meet deadlines and manage time in a busy agency environment
- Maintain existing websites and interactive content

Freelance Projects
